Cone Hops

Farmer Bales

Pressed hop cones (flowers) are received into New Zealand Hops cold storage facilities direct from the growers during harvest and after checking moisture content and sampling for grading and chemistry the bales are placed into cold storage to preserve the hops at peak harvest freshness. The bales are then either held for pelleting operations or shipped direct under refrigeration to brewers who continue to purchase hops in this traditional fashion.

Dimensions: 150 cm x 75 cm x 75 cm

Net Weight: Approx. 120 kg

Gross Weight: Approx. 122 kg

Mini Vac Pockets

This pack type aids the long term stability of cone hops during storage and is ideal for those breweries that use cone hops in smaller quantities. Available as compressed 1, 5 & 10 kilogram whole hop cones vacuum packed in aluminum barrier foil and shipped in a cardboard outer.
